
Homer Pro 3.4.3 crack Homer is a full-featured animation and compositing application, originally developed for Cinema 4D but now suitable for other 3D applications and design suites such as Blender, 3DS Max, Maya and Lightwave. The core of Homer is the "Homer Engine", which is a non-linear animation system that allows you to animate scenes in real-time without baking any of the scenes into 3D scenes. The Homer Engine uses two types of "tricks" on scenes to make it possible to do animations. First, scenes are rendered with 3D geometry information, rather than with 2D images. Second, you are able to create new layers within the frames. This makes it possible to change up different parts of your scene, while leaving different parts behind. You can completely toggle off all the rendering steps for high performance, though this can lead to fairly "stiff" animation frames.

Change log :

Version 3.4.3 is a bugfix release, with the following updates:

In addition to the above, version 3.4.0 has been updated for compatibility with Cinema 4D R14 Studio and other tool changes. Please refer to this page for more information on these changes: <http://www.homer-viewer.com/news/cinema-4d-r14-studio-and-c4ds2014/>

Version 3.3 has an extensive list of changes, including the following:

Version 3.2 comes with many improvements including support for Cinema 4D R11.5, Motion Capture for Cinema 4D, improved character animation tools, and more. Please refer to this page for more information on these changes: <http://www.homer-viewer.com/news/3d-animation-tools-for-cinema-4d/>

The release of version 2.2 brings several new features that enhance the user interface and usability including an External Compositing Editor window, improved area lights, improved frame range navigation (JKL keys), support for R11 materials, support for MPC boards (experimental), LUT support in the compositing editor (Pro only), and much more.

Version 2.1 brings many new features and improvements including:

Homer has been in existence since early 1997 and has changed hands a couple of times. The most recent version was released in March 2005 and is currently in development by Robert Kvarnström at Mixelpix. Original development was done by Peter Effinger, but the last commercial release (1.5) came out in November 2002. Homer has been mainly used for commercials, music videos and ambitious short films such as "So You Think You Can Dance" (featuring Robert Kvarnström's wife, Aida).
